and educate

- Differentiate your practice
- Communicate the possibilities
- Educate your patients
- Close more complementary procedures
- Increase patient satisfaction
REVIEW the possibilities

DECEIVE direction

DELIVER the dream

FACE sculptor®
- ✓ assessment
- ✓ automated measurements
- ✓ rhinoplasty
- ✓ chin augmentation
- ✓ injectables
- ✓ lifts
- ✓ facial contouring
- ✓ skin resurfacing

BREAST sculptor®
- ✓ assessment
- ✓ patient education
- ✓ augmentation
- ✓ mastopexy
- ✓ revision
- ✓ fat grafting

BODY sculptor®
- ✓ tummy tuck
- ✓ liposuction
- ✓ buttock augmentation
- ✓ cellulite treatment
- ✓ measure volume change

Show your patients the exciting possibilities of their anticipated aesthetic procedures with Sculptor 3D software . . .

only from CANFIELD.

3D Skin Analysis identifies, analyzes, and displays results for Spots, Wrinkles, Texture, Pores, Brown Spots, and Red Areas. Graphs depict the calculated score for each feature.

Automated measurements, some only possible with 3D technology, help your patients understand their current condition.

Canfield’s proprietary RBX® technology separates the unique color signatures of Red and Brown skin components for unequaled visualization of skin conditions. Gray mode reveals contours, presenting opportunities for corrective procedures.

Markerless Tracking™ provides a dynamic assessment of skin surface changes. Skin surfaces are automatically aligned, tracked and mapped. Vector arrows provide a precise indication of the direction and magnitude of skin movement, which is ideal for encouraging future treatments. Physician review of outcomes helps refine treatment techniques.
simulate outcomes

**Intuitive interface** helps you achieve realistic 3D results from day one.

Slider-based dorsal height adjustment for instantaneous three-dimensional rhinoplasty simulation.

**Contouring** Simulate removing or adding volume.

Visualize the degree of contour change with a color distance map.

Overlaying her pre-op image with the simulated outcome makes the differences more apparent.

Close more complementary procedures

Demonstrate the difference between the likely outcome with only one or multiple procedures. With Face Sculptor you can explore the possibilities and help your patient decide on the best possible treatment plan.

VECTRA H2 is not intended for use in the diagnosis of disease or other conditions, or in the cure, mitigation, treatment, or prevention of diseases. VECTRA H2 is for illustrative purposes to facilitate conversations with patients about surgical expectations. It cannot be relied upon for and does not take the place of proper pre-surgical measurements and planning.
Automated measurements, some only possible with 3D technology, help your patients understand their current condition.

**Assess and educate**

**Simulate outcomes**

**Intuitive interface** helps you achieve realistic 3D results from day one.

Breast Sculptor's Education Checklist provides a series of customizable disclaimers with relevant visual tools and measurements to streamline your informed consent process. Print a signed summary of topics covered.

Sculptor's dynamic soft tissue modeling technology generates actual 3D models of the implants you select from the product catalogs you normally use. A realistic outcome is then calculated based upon gravity, shape, and the placement of selected implants.

Compare multiple implant scenarios with different size, style and shape options.

**Mastopexy** interface in Breast Sculptor closely models the way you perform surgery, including adjustable incisions used to simulate the excising of skin.
**Optional IntelliStage®** allows for fast and easy 360° capture.

**Body Contouring** Simulate removing or adding volume.

**Complementary procedures** Help your patient decide on the best possible treatment plan by showing the difference between the likely outcome with single or multiple procedures.

**ViewMyConsult®** web portal helps you stay connected to your patients as they consider the possibilities of aesthetic procedures. By accessing a secure, password-protected web portal, patients can view their 3D pictures in the privacy of their own home. Your patient can take it all home with ViewMyConsult and personalized printed reports.

**VECTRA H2 flash folds for safe and compact transport.**

**Automated circumference and volume measurements for body contouring, only possible with 3D technology and 360° imaging.**

**Overlaying** her pre-op image with the simulated outcome makes the differences more apparent.

**Personal view is only possible with a 3D image.**
Portable, lightweight, easy to use

Photographic quality 3D images

Innovative flash provides studio quality lighting for optimal viewing of topography and contours

Two unique sets of ranging lights—one for face and one for body—ensure optimal capture distance and resolution

Unrivaled assessment and consultation software

Custom posing mat included.
